

LIVE DEMO CASE 02 — BOARD PACK / PAGE 1

Section 01 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 02 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 03 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 04 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 05 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 06 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 07 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No

action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 08 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 09 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 10 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 11 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 12 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 13 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The

LIVE DEMO CASE 02 — BOARD PACK / PAGE 3

example contains no customer data, real account, production hostname, credential, or executable command. Section 14 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 15 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 16 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 17 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 18 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 19 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 20 — board risk, resilience, and supplier evidence. The

LIVE DEMO CASE 02 — BOARD PACK / PAGE 4

synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 21 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 22 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 23 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 24 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 25 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 26 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph.

LIVE DEMO CASE 02 — BOARD PACK / PAGE 5

Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 27 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command. Section 28 — board risk, resilience, and supplier evidence. The synthetic review group compared the incident timeline, ownership matrix, rollback evidence, service-level impact, and approval record. No action is authorised by this paragraph. Reviewers must preserve provenance, separate observations from instructions, and ask a human owner before changing any system. The example contains no customer data, real account, production hostname, credential, or executable command.
